PART I · CHAPTER 1 · LEAVE-BEHIND

The Old Playbook Is Dead

Pragmatic Remix: All 37 Boxes (Reframed)

EXECUTIVE SUMMARY

The economics, workflows, and buyer dynamics that defined product marketing for twenty years are all changing at once. AI agents now compress weeks of buyer research into minutes. Most PMM content is invisible to them. The Pragmatic Framework's 37 activities cluster into three tiers—automatable, augmentable, and irreducibly human—and the PMMs who master this shift will operate at a fundamentally different level.

Sarah's Story

A product marketer noticed three strange patterns: traffic up but forms down, prospects knowing competitive details they shouldn't, and enterprise deals closing in 3 weeks instead of 11. The cause: buyers had started using AI agents to do research, comparison shopping, and vendor pre-qualification in hours instead of weeks.

THE CORE SHIFT

Her buyer had hired an intermediary that didn't care about brand affinity, didn't respond to emotional storytelling, and couldn't be schmoozed over a steak dinner. That intermediary now determines who makes the shortlist.

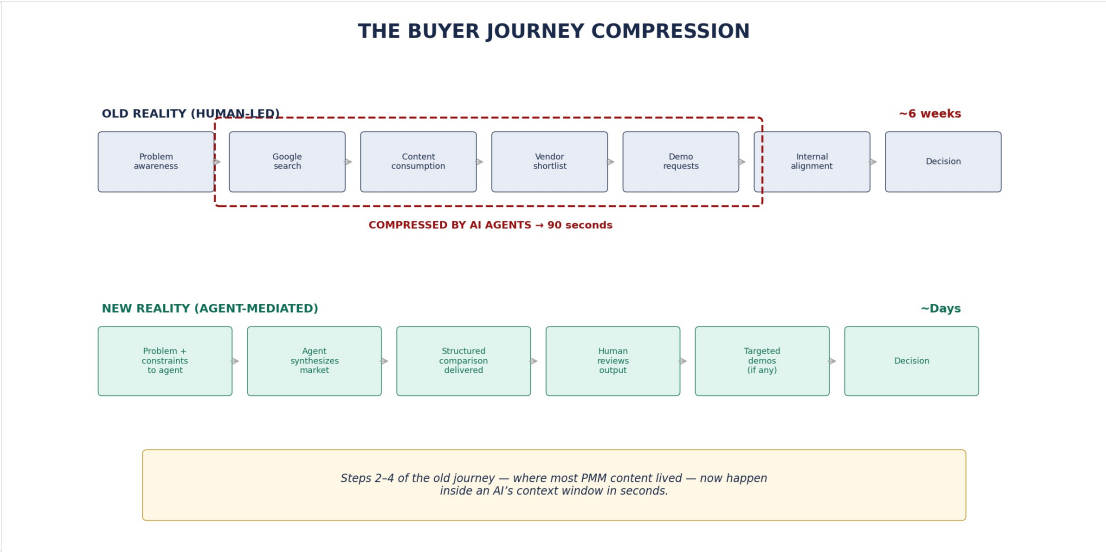

Figure 1: Steps 2–4 of the old journey—where most PMM content lived—now happen inside an AI's context window in seconds.

The Three Eras of Enterprise Data

ERA 1: Data Warehouse

Age of Reports. ETL batch jobs. Static deliverables. Quarterly reviews. Slow data, slow marketing, slow buyers.

ERA 2: Data Lake

Age of Unification. CDP era. Customer strategy. Journey mapping. Win/loss analysis. "A CDP knows your customer."

ERA 3: Data Fabric

Age of Agents. Agentic AI. Federated metadata. Agents that monitor, adjust, generate. "An AMP knows your business."

A DMP knew your audience. A CDP knew your customer. An AMP knows your business.

The Visibility Gap

The delta between what AI agents can access and what remains invisible to them. Most B2B marketing assets—nurture sequences, gated content, ABM campaigns—exist in the invisible zone.

THE VISIBILITY GAP

What AI agents surface vs. what most PMM teams produce

WHAT AGENTS CAN PROCESS	WHAT AGENTS SKIP
✓ Structured comparison data (schema.org)	✗ Narrative product pages
✓ Third-party review rankings (G2, Capterra)	✗ Video testimonials & demos
✓ Technical documentation & APIs	✗ Gated PDF case studies & ebooks
✓ Machine-readable pricing structures	✗ JavaScript-rendered content
✓ News with verifiable citations	✗ Email nurture sequences

The Visibility Gap is not a technology problem — it is a prioritization problem.

Figure 2: The Visibility Gap is not a technology problem—it is a prioritization problem.

From SEO to GEO

SEO optimizes for ranking (blue links). **GEO** (Generative Engine Optimization) optimizes for citation in synthesized answers. In SEO you compete on keywords; in GEO you compete on entity authority.

FROM SEO TO GEO

Generative Engine Optimization

	SEO	→ GEO
Optimize for	Ranking on a list	**Citation in a synthesis**
Compete on	Keywords	**Entity authority**
Build	Backlinks	**Structured proof points**
What matters	Title tag	**Schema markup**
Volume effect	More content helps	**Better structure helps**
Buyer sees	Blue links	**Synthesized answer**

Figure 3: The shift from ranking to citation, from keywords to entity authority.

The Audit (Do This Week): Open Claude, ChatGPT, or Perplexity. Ask it to evaluate vendors in your category. See if your company appears. That 60-second exercise tells you more about your GEO readiness than any consultant's report.

The Pragmatic Framework Meets the Machine

What happens to each of the 37 Pragmatic boxes when AI agents become part of the team? The exercise produced three natural clusters:

CLUSTER 1: Automated

Market sizing, derivative content, event logistics, sales tools production. Agents do the majority today.

If your value is producing artifacts, the automation wave is not your friend.

CLUSTER 2: Augmented

Positioning, win/loss analysis, buyer personas, pricing strategy. Human essential, agent accelerates.

Operating without agents becomes a competitive disadvantage.

CLUSTER 3: Elevated

Stakeholder management, customer empathy, thought leadership. Irreducibly human.

These become MORE important because machines can't do them.

The Curriculum Architecture

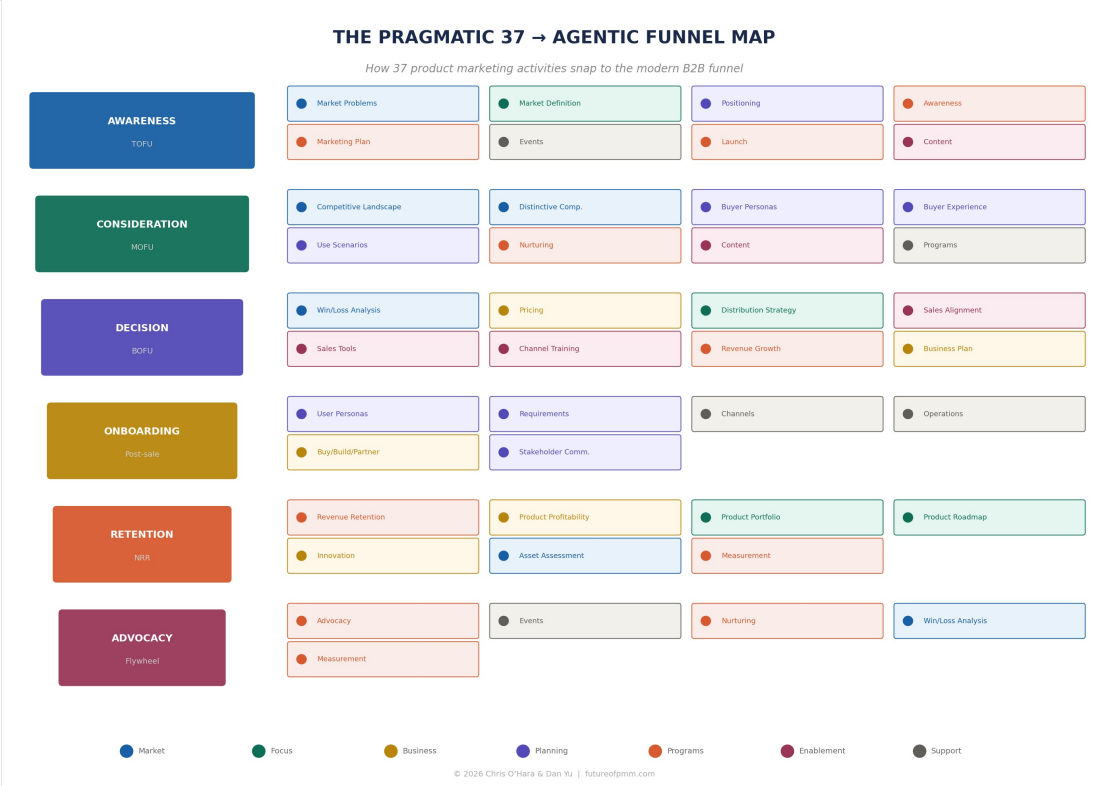

Figure 4: All 37 Pragmatic activities mapped to the six-stage agentic funnel, color-coded by category.

THE 10X THESIS

A PMM who automates 20 hours a week of Cluster One work and redirects that time into Cluster Two and Three activities will outperform one still manually updating battlecards—not by 20%, but by a factor that justifies the title of this book.

What "10x yourself" means: Not working ten times harder or faster. Operating at a fundamentally different level of strategic impact because you've offloaded mechanical work to machines and are finally free to do work only a human can do.

CMO PERSPECTIVE

The conversation about AI inside marketing departments is almost entirely wrong. It's focused on efficiency—that's a CFO question. The CMO question: **how do we produce fundamentally different outputs?**

Key Takeaways:

- The agentic shift is a structural transformation, not a toolkit upgrade
- Buyer behavior has already changed—AI agents compress research from weeks to hours
- Most PMM content is invisible to agents (the Visibility Gap)
- The Pragmatic 37 cluster into: Automated, Augmented, Elevated
- The PMM who frees Cluster One hours to invest in Cluster Three operates at a different level
